

Anti-Human Ki-67-168Er

Catalog #: 3168007B

Package Size: 100 tests

Storage: Store product at 4°C. Do not freeze.

Cross Reactivity: Rat, Mouse, Porcine

Clone: B56

Isotype: Mouse IgG1

Formulation: Antibody stabilizer with 0.05% Sodium Azide

Technical Information

Validation: Each lot of conjugated antibody is quality control tested by CyTOF® analysis of stained cells using the appropriate positive and negative cell staining and/or activation controls.

Recommended Usage: The suggested use is 1 µl for up to 3 X 10⁶ live cells in 100 µl. It is recommended that the antibody be titrated for optimal performance for each of the desired applications.

Human PBMCs were incubated for 3 days in media alone (left) or with PHA (right). Cells were then stained with IdU, and then fixed, permeabilized, and stained with 168Er anti-Ki-67 (B56). Total viable cells are displayed in the analysis.

Description

Ki-67 protein, also known as MKI67, is a nuclear protein that is associated with cellular proliferation. Ki-67 protein is expressed in all cell types, is present during active phases of the cell cycle (G1, S, G2 and Mitosis) and not during the resting phase G0. Because of this, Ki-67 is an excellent marker for determining the fraction of proliferating cells within a given population of cells.
