

Anti-Mouse CD326[EpCAM]-166Er

Catalog #: 3166014B

Package Size: 100 tests

Storage: Store product at 4°C. Do not freeze.

Cross Reactivity: Mouse

Clone: G8.8

Isotype: Rat IgG2a

Formulation: Antibody stabilizer with 0.05% Sodium Azide

Technical Information

Validation: Each lot of conjugated antibody is quality control tested by CyTOF[®] analysis of stained cells using the appropriate positive and negative cell staining and/or activation controls.

Recommended Usage: The suggested use is 1 µl for up to 3 X 10⁶ live cells in 100 µl. It is recommended that the antibody be titrated for optimal performance for each of the desired applications.

Mouse TE-71 (top) or Chinese Hamster Ovary (CHO) (bottom) cells stained with 166Er-anti-CD326/EpCAM (G8.8). Total cells are displayed in the analysis.

Description

EpCAM (CD326) is a transmembrane glycoprotein expressed in many developing epithelia and in some epithelia (e.g., intestinal epithelia) in adult animals. It has been suggested that EpCAM can promote intercellular adhesion through homophilic interactions but also can attenuate cadherin-mediated adhesion. EpCAM also has been studied intensively in the context of cancer, both because, as a tumor antigen, it may represent a suitable target for immunotherapy and because it may play a role in cancer pathogenesis. EpCAM expression correlates with tumor aggressiveness and poor prognosis and is linked to enhanced cancer cell migration, invasion, and metastasis. More recent studies have described a role for EpCAM in normal and cancer stem function.
